DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 04/14/04 has been entered.

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 73-75, 77 and 80 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 81-87 of copending Application No. 10/805,118. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious for one skilled in the art

at the time of the invention to determine that the “passivated conductive layer” is actually created by “being exposed to a material selected from the group consisting of phosphine and methylsilane,” as recited in co-pending claim 81. This phrase is equivalent to claim 73 of the instant application that recites “the conductive layer being exposed to a material selected from the group consisting of phosphine and methylsilane to reduce an ability of the conductive layer to associate with oxygen.”

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
